Many journals are available today for publication of research material in industrial engineering and management. However, there is still a need to quickly disseminate research work related to all aspects of industrial engineering and industrial management (IEM) to the scientific community. Often, by the time research article gets published in the traditional peer-reviewed journals in the field of IEM, the articles are at least one to two years old because of lengthy review process of these journals. The industrial engineering and management journal (IJEM) serves this purpose of overcoming long delay between the submission and publication of scientific papers. It is an open-access journal and will help improve the visibility among the scientific readers and improve impact of the field on the private and public profit/non-profit organizations by providing the scientific community with the current research findings in real time. Open Access is a growing international movement that uses the Internet to open the locked doors that once hide knowledge. It encourages the unrestricted sharing of research results with everyone, everywhere, for the advancement and enjoyment of science and society. It is published by OMICS Publishing Group, an open-access publisher and scientific events organizer for advancement of science and technology. OMICS publishing is the member of/publishing partner of/source content provider to Cross Ref, Pub Med Central, DOAJ (Directory of open-access journals), Index Copernicus (journals master list), Scientific Commons, and EBSCO Publishing.

The focus areas of the journal includes Production, Logistics, Quality, and Operational Research; Information Systems, Technology and Communication; Industrial Economics and Regional Development; Management, Organizational Behavior and Human Resources; Finance, Accounting and Marketing; and Education, Training and Professional Skills. We encourage the scientific community to submit their research and education related articles to industrial engineering and management to the journal. The editorial board will strive hard to publish high quality papers in the journal as soon as possible after having a rigorous review of the submitted papers. We appreciate and thank in advance for your support and look forward to serving you for many years to come. We promise to publish high quality articles in real time.
