Mechanical and Aerospace Engineering
at Princeton University

Undergraduate Handbook
2009 - 2010
This booklet supersedes all others and applies to the Classes of 2012 and beyond.

This booklet describes the undergraduate academic program of the MAE Department in more detail than that available in the Undergraduate Announcement. It provides information both to prospective concentrators and to undergraduates already enrolled in the Department. For specific course descriptions see the Undergraduate Announcement or the Graduate School Announcement as appropriate.

APPENDIX I: REQUIREMENT SHEETS
   AEROSPACE ENGINEERING
   MECHANICAL ENGINEERING
   AEROSPACE AND MECHANICAL ENGINEERING
THE DEPARTMENT OF MECHANICAL AND AEROSPACE ENGINEERING

I. OVERVIEW

The Department of Mechanical and Aerospace Engineering is concerned with the engineering science and technologies associated with ground, air, water, and space transportation, including control and dynamics of vehicles and systems, energy conversion and use, environmental effects, fluids, materials, and applied physics. To accommodate this breadth of interest, the Department offers two programs of study: Mechanical Engineering and Aerospace Engineering. Either program may be completed individually or, through careful planning and selection of technical electives, the requirements of both the Mechanical and Aerospace Engineering programs may be satisfied simultaneously. (See the Department Representative for further information).

Departmental students may also participate in the SEAS Engineering Physics Program, or other SEAS certificate programs such as Engineering and Management Systems, Engineering Biology, Applied and Computational Mathematics, Robotics and Intelligent Systems, Materials Science in Engineering, Sustainable Energy, and the Program in Applications of Computing.

Both the Mechanical and Aerospace Engineering programs draw on courses in the underlying fundamental sciences and mathematics during the first year and introductory engineering science courses during the second year. Students are shown the creative application of knowledge for the solution of technical problems. Various aspects of engineering design, the process of devising a system to meet a need, are introduced to the student through the laboratories in the second year and continue through the upperclass years. Normally, during the third year all students take a two semester design sequence and additional engineering science courses, performing analyses and studying applications in the areas of energy, power systems, structures, and the dynamics of machines and their control. The courses in design offered during the third year, combined with further depth in engineering science, enable students to undertake realistic design projects during their senior year. The programs are designed to prepare the graduate for an engineering career and the ability to grow professionally.

The Department recognizes that students have a wide variety of career objectives. Some may intend to enter industry directly in an engineering capacity, or to continue studies in the graduate school in engineering or applied science. Others may wish to take an engineering program in preparation for careers in business, law, or medicine. Sufficient flexibility is provided within the undergraduate program in the Department to permit meeting these and other varied objectives while acquiring a foundation in the engineering disciplines and associated problem solving skills.

The undergraduate programs in Aerospace and Mechanical Engineering are accredited by the Engineering Accreditation Commission of ABET, Inc. (111 Market Place, Suite 1050, Baltimore, MD 21202, Telephone: (410) 347-7000, Fax: (410) 625-2238, Web: http://www.abet.org ).
All Departmental students engage in independent projects, some as early as the sophomore year but, most commonly, during the senior year. Independent work is an important complement to formal course work, and affords students the opportunity to collaborate closely with faculty and graduate students while working on real engineering problems. Support for student projects is available through the John Marshall II Memorial Prize, awarded annually to one or more seniors to support their experimental projects, with preference given to projects in aeronautics. Additionally, the Morgan W. McKinzie ’93 Senior Thesis Fund provides financial support for independent work or senior thesis with preference given to projects in aircraft design and propulsion. The selection is based on proposals submitted by students in the fall of the senior year for both awards. Excellence in independent work is recognized by the Department through the Donald Janssen Dike Award for Excellence in Undergraduate Research, and outstanding senior thesis is recognized through the Morgan W. McKinzie ‘93 Senior Thesis Prize, both prizes are awarded on Class Day.

Departmental requirements are described in Section II. Sample curricula are presented in Section III. Titles of recent independent projects undertaken by undergraduates in the Department appear in Section V. Plans after graduation for the last five classes are summarized in Section VI and a brief description of the faculty research interests is found in Section VII. Section VIII lists "Who to See" among the faculty and students to obtain additional information.
II. REQUIREMENTS (See Individual Forms, Appendix I.)

Some of the requirements may be satisfied by advanced placement or by equivalent courses. No courses taken to satisfy these requirements may be taken on a pass/fail or audit basis. Students entering the Department are expected to meet the requirements for the freshman year established by the School of Engineering and Applied Science.

A. Introductory Courses (Sophomore Year)

The required introductory courses that are prerequisites for the Departmental upperclass courses, normally completed by the end of the sophomore year, are:

1. Mechanical and Aerospace Engineering
   
   MAE 206 Introduction to Engineering Dynamics
   MAE 221 Thermodynamics
   MAE 222 Mechanics of Fluids
   MAE 223 Modern Solid Mechanics\(^1\)
   MAE 224 Integrated Laboratory

   The Sophomore Laboratory provides experiments associated with Thermodynamics (MAE 221), Mechanics of Fluids (MAE 222) and Electronics.

2. Mathematics
   
   MAT 201/202  Multivariable Calculus and Linear Algebra
   -or-
   MAT 203/204  Advanced Multivariable Calculus and Linear Algebra

3. Computer Programming (School of Engineering & Applied Science requirement)
   
   All BSE students must take COS 126 to satisfy the BSE computing requirement.

\(^1\) CEE205 is an acceptable substitute for MAE 223 for those students interested in structures
B. Upperclass Courses (Junior and Senior Year).

To graduate, all Departmental students must satisfactorily complete the following requirements:

1. Applications of Mathematics

Two courses are required for both Mechanical and Aerospace Engineers.

a. One of these must be a course in differential equations:
   
   MAE 305 (MAT 301) Mathematics in Engineering I

b. The other course must be a course in matrix analysis and finite element methods:
   
   CEE 361 (MAE 325) Structural Analysis and Introduction to Finite Element Methods

In addition, all Mechanical Engineers must take a mathematics elective usually selected from the following list:

- MAE 306 (MAT 302) Mathematics in Engineering II (strongly recommended for those planning graduate work in engineering or applied science)
- ORF 245 Fundamentals of Engineering Statistics
- ORF 307 Optimization
- ORF 309 Probability and Stochastic Systems (MAT 309/ELE 380)
- COS 309 Fundamentals of Scientific Computing
- COS 340 Reasoning About Computation
- MAT 304 Introduction to Partial Differential Equations
- MAT 305 Mathematical Programming
- MAT 306 Introduction to Discrete Mathematics
- MAT 317 Complex Analysis with Applications

(Alternatives not on this list must be approved by the Departmental Representative in advance).
C. Departmental Courses

A minimum of eight upper level Departmental courses are required. These eight courses must be distributed in the following manner:

1. Engineering Science Courses - Five courses are required from Sections (a) (b) and (c). Core requirements for both programs are footnoted.

   (a) **Dynamics and Control**
      
      MAE 331 Aircraft Flight Dynamics
      MAE 341 Space Flight
      MAE 344 Introduction to Bioengineering and Medical Devices
      MAE 345 Robotics and Intelligent Systems
      MAE 433 Automatic Control Systems
      MAE 434 Modern Control

   (b) **Fluid Mechanics/Thermal Sciences**
      
      MAE 328 Energy for a Greenhouse-Constrained World
      MAE 335 Fluid Dynamics
      MAE 336 Viscous Flows or MAE 552 Viscous Flows and Boundary Layers
      MAE 423 Heat Transfer
      MAE 426 Rocket and Air-Breathing Propulsion Technology
      MAE 427 Mobile Power Plants

   (c) **Materials/Structures**
      
      MAE 324 Structure and Properties of Materials
      MAE 325 Structural Analysis and Intro to Finite Element Methods
      MAE 334 Materials Selection and Design
      MSE 301 Materials Science and Engineering
      CEE 362 Structural Dynamics and Earthquake Engineering

---

1 MAE 331 or 341 required for Aerospace Engineers.
2 MAE 433 required for Mechanical and Aerospace Engineers.
3 MAE 335 or 423 required for Mechanical Engineers. MAE 335 required for Aerospace Engineers.
4 MAE 427 or 426 required for Aerospace Engineers.
5 MAE 324 or 334 or MSE 301 required for Mechanical and Aerospace Engineers.
6 MAE 325 required for Mechanical and Aerospace Engineers.
2. **Engineering Design Courses** - Three courses are required.

   MAE 321 Engineering Design\(^1\)
   MAE 322 Mechanical Design\(^2\)
   MAE 332 Aircraft Design\(^3\)
   MAE 342 Space System Design\(^3\)
   MAE 412 Microprocessors for Measurement and Control\(^2\)

   *Note: Independent Work, Senior Project or Senior Thesis with design may satisfy one of the three design requirements. These courses are: MAE 339D, MAE 340D, MAE 440D and MAE 442D.*

3. **Independent Work** - All students are required to participate in a self-directed research or engineering project. At least one semester of independent work as applied science research or an engineering project is required. This may be satisfied by a semester of independent work (339 or 340). If approved by the Departmental representative, an independent work project may satisfy a portion of the design requirement (339D, 340D). 339 and 339D are offered in the fall, and 340 and 340D are offered in the spring. A year-long senior project (440) or senior thesis (442) or senior project with design (440D) or senior thesis with design (442D) also meets this requirement. **Students are strongly encouraged to select the year-long project or thesis option.** Senior projects are intended for teams or groups while senior thesis is intended for individuals. For senior project or thesis, work begins in the fall but enrollment is only in spring term when a double grade is awarded. *Please note: If a student has selected to participate in a year-long project or thesis and is enrolled in only three courses during the fall semester, it is required that they will enroll in Senior Project or Thesis during the spring semester. For these students, it will NOT be possible to drop-down to a one-semester course of Independent Work without incurring a failure for Independent Work in the fall term.*

   MAE 339/340 Independent Work (Fall/Spring)
   MAE 339D/340D Independent Work with Design (Fall/Spring)\(^4\)
   MAE 440 Senior Project (Spring)\(^5\)
   MAE 440D Senior Project with Design (Spring)\(^4,5\)
   MAE 442 Senior Thesis (Spring)\(^5\)
   MAE 442D Senior Thesis with Design (Spring)\(^4,5\)

None of the Department requirements can be taken on a pass/fail or audit basis. All requests for substitution, other than those listed under the Engineering Physics Program (Section E), must be approved by the Departmental Representative in advance.

---

1 Required for Mechanical Engineers and Aerospace Engineers.
2 MAE 322 or MAE 412 required for Mechanical Engineers.
3 MAE 332 or MAE 342 required for Aerospace Engineers.
4 May also satisfy one Engineering Design requirement.
5 Year-long project with enrollment in spring semester only
4. The Engineering School requirements in the **humanities and social sciences** must also be met (a minimum of seven courses covering four distinct areas from the six areas offered). See the Undergraduate Announcement for full description and distribution areas. In addition a one semester writing course is required. This course is typically completed in the freshman year.

D. General Information

Students are encouraged to elect more than the one required semester of independent work (with or without design) as part of their plan of study, and to participate in the extensive research programs of the Department.

Additional technical courses (which may include both undergraduate and graduate courses) can be used to pursue a specialty within the Department in greater depth.

It is also possible to participate in a variety of interdepartmental programs or expand one's studies in the humanities or social sciences beyond the seven courses required by the School of Engineering and Applied Science.

Professional Ethics

Professional ethics is an important topic for all engineers. Honor code, adherence to University Regulations and adherence to rules in individual courses and laboratories are all part of our student’s exposure to professional ethical matters. In addition, aspects of engineering ethics are considered in engineering courses through examples and case studies. Given that mechanical and aerospace engineering works have impact on society, the concepts of economical and safe design are foundations of ethical conduct of practitioners in the field. Students are urged to understand ethical guidelines further in the mechanical and aerospace fields as defined by the engineering societies:

ASME (http://www.asme.org/Governance/Society_Policies.cfm)
   Scroll to Policy 15.7 Ethics (available in PDF or Word format)

AIAA (http://www.aiaa.org/content.cfm?pageid=198)
   Code of Ethics
Honors

The determination of honors upon graduation is made by the faculty of the Department based primarily on the grade average achieved during junior and senior year in both required and elective technical courses. The student’s overall academic record and performance in independent work is also considered.

The completion of all the Departmental requirements, together with an average of 2.0* or better in the Departmental courses will lead to a Departmental recommendation that the student graduate. The decision to deny a recommendation for graduation, to any student failing to meet the criteria above, will be made by the Departmental faculty on the basis of a full review of the student's record.

*The grade average will be computed on the basis of equal weighing of the grades in the Departmental courses within the following numerical equivalents: A+ = 4.0, A = 4.0, A- = 3.7, B+ = 3.3, B = 3.0, B- = 2.7, C+ = 2.3, C = 2.0, C- = 1.7, D = 1.0, F = 0.0
III. RECOMMENDED SAMPLE CURRICULA

Each student's program is planned individually in consultation with their advisor or the Departmental Representative. Sample curricula for the major options within the Department are presented later in this booklet. These sample curricula should be used as recommendations only. Individual variations are possible (and encouraged) as long as the Departmental requirements are satisfied.

A. Course Descriptions

Descriptions of the courses offered appear in the Undergraduate Announcement or the Graduate School Announcement, as appropriate. Additional information can be obtained by contacting the instructor in charge. The list below summarizes information on prerequisites and other background for each of the undergraduate upper level courses in the Department. The following information is intended to assist the student in the selection of courses in the upper class years.

305 Mathematics in Engineering I (Fall/Spring) (Ordinary Differential Equations) - requires MAT 201 and MAT 202 as prerequisites with the possibility that MAT 202 may be taken concurrently. This course should be taken as early as possible in the student's program. **Required for all Mechanical and Aerospace Engineering majors.**

306 Mathematics in Engineering II (Spring) (Partial Differential Equations and Complex Variables) - requires MAE 305 as an absolute prerequisite. This course satisfies the second mathematics requirement in the department and in the Engineering Physics Program and is **recommended for those planning to go to graduate school in engineering or applied science.**

321/322 Engineering Design/Mechanical Design (Fall/Spring) - Requires only the sophomore curriculum. **MAE 321 is required for all Mechanical and Aerospace Engineering students.** Either MAE 322 or MAE 412 is required for all Mechanical Engineering students.

324 Structure and Properties of Materials (Fall). SEAS freshman requirements of chemistry, physics, and math are prerequisites. **Either MAE 324, MAE 334 or MSE 301 is required for all Mechanical and Aerospace Engineering majors.**

325 Structural Analysis and Intro to Finite Element Methods (Fall) – requires only sophomore Modern Solid Mechanics (MAE 223). **Required of all Mechanical and Aerospace Engineering students.**

328 Energy for a Greenhouse-Constrained World (Spring) – Recommended for students interested in energy production and its influence on the environment. Requires MAE 221/222 as prerequisites.
Aircraft Flight Dynamics/Aircraft Design (Fall/Spring) - Requires the sophomore curriculum. Simultaneous enrollment in Fluid Dynamics (MAE 335) is desirable, although it is not required. Required for Aerospace Engineering majors. Optionally, MAE 341/342 may be taken to satisfy this requirement. (MAE 331/332 and MAE 341/342 are offered in alternate years.)

Materials Selection and Design [Fall] – Requires Modern Solid Mechanics [MAE 223]. Either MAE 324, MAE 334 or MSE 301 is required for all Mechanical and Aerospace Engineering majors.

Fluid Dynamics (Fall) - requires only the sophomore curriculum as a prerequisite and Mathematics in Engineering I (MAE 305) as a co-requisite. Required for Aerospace Engineering majors. MAE 335 or MAE 423 is required for all Mechanical Engineering students.

Viscous Flows (Spring) - requires only the sophomore curriculum and Mathematics in Engineering I (MAE 305) as a prerequisite.

Independent work is intended for juniors or seniors doing only a one term project. Students develop a topic of their own or select from a list of topics prepared by the faculty. They develop a work plan and select an adviser and a second reader. Registration for the course is accomplished at normal course selection time, while topic and advisor can be selected at any time prior to the end of the first two weeks of the appropriate semester.

Independent work with design is intended for juniors or seniors doing only a one term project. Similar to 339/340, with the principal difference that the project must incorporate aspects and principles of design in a system, product, vehicle, device, apparatus, or other design element. Registration for the course is accomplished at normal course selection time, while topic and advisor can be selected at any time prior to the end of the first two weeks of the appropriate semester. Appropriateness of the design aspects of the project is subject to approval by the Departmental Representative.

Space Flight/Space System Design (Fall/Spring) – MAE 341 requires Calculus and MAE 305 or permission of instructor. MAE 342 requires MAE 305 and MAE 341 is recommended. Required for Aerospace Engineering majors. Optionally, MAE 331/332 may be taken to satisfy this requirement. (MAE 331/332 and MAE 341/342 are offered in alternate years.)

Introduction to Bioengineering and Medical Devices [Spring] – MAE 344 requires MAT 103, MAT 104, PHY 103 and PHY 104.

Robotics and Intelligent Systems [Fall] – MAE 345 is an optional core requirement of the Robotics and Intelligent Systems Certificate Program. This course requires MAT 202 or MAT 204 and COS 111, or COS 126, or ORF 201.
Microprocessors for Measurement and Control (Fall) - requires satisfactory completion of the departmental electronics requirement. Often taken in junior year by those with potential interest in senior independent work in this area. Either MAE 322 or MAE 412 is required for all Mechanical Engineering students.

Heat Transfer (Fall) - requires the standard sophomore curriculum and MAE 305 as a co-requisite. Either MAE 423 or MAE 335 is required for all Mechanical Engineering students.

Introduction to Physical Oceanography (Fall) - requires MAT 202 [GEO 425] as a prerequisite.

Rocket and Air-Breathing Propulsion Technology (Spring) – Prerequisites: MAE 221 and MAE 222. Either MAE 426 or MAE 427 is required for all Aerospace Engineering students.

Fossil Fuel Energy Conversion: Mobile Power Plants (Spring) - requires only the sophomore prerequisites. Either MAE 427 or MAE 426 is required for all Aerospace Engineering students.

Automatic Control Systems (Spring) - Mathematics in Engineering I (MAE 305) in addition to sophomore curriculum is a prerequisite. Required of all Mechanical and Aerospace Engineering students.

Modern Control (Spring) - A useful complement to MAE 433, treating more advanced topics in control system design. MAE 433 is a prerequisite.

Senior Project (Spring) - The senior project is a year long independent study intended for students who choose to work in teams of two or more. Work begins in the fall, but enrollment is only in spring term when a double grade is awarded. Groups develop their own topic or select a topic from a list of topics prepared by the faculty. Groups develop a work plan and select an advisor and a second reader for their work.

Senior Project with Design (Spring) - Similar to 440 with the principal difference that the team or group project must incorporate aspects and principals of design, whether for a system, product, vehicle, device, software, or apparatus. The year-long senior project with design may be used satisfy a portion of the department's design requirement. Appropriateness of the design aspects of the project is subject to approval by the Departmental Representative.

Senior Thesis (Spring) - The senior thesis is an independent study for individual students. Work begins in the fall, but enrollment is only in spring term when a double grade is awarded. Students develop their own topic or select a topic from a list of topics prepared by the faculty. Students develop a work plan and select an advisor and a second reader for their work.
Senior Thesis with Design (Spring) – Similar to 442 with the principal difference that the thesis must incorporate aspects and principals of design, whether for a system, product, vehicle, device, software, or apparatus. The year-long senior thesis with design may be used to satisfy a portion of the department's design requirement. ** Appropriateness of the design aspects of the project is subject to approval by the Departmental Representative.**

Entrepreneurial Engineering (Spring) – Open to Engineering and Liberal Arts Majors. Course will not serve as a Technical Elective.
B. Standard Sophomore Curriculum

The recommended sophomore curriculum is common to all Departmental students, except Engineering Physics students who are allowed certain substitutions (see Section E).

(T.E. = Technical Elective)  
(N.T.E. = Non Technical Elective)

**SOPHOMORE YEAR**

<table>

<td>N.T.E.</td>
</tr>
</tbody>
</table>

The School of Engineering and Applied Science computer programming requirement must be satisfied by the end of the Sophomore Year.

Some sample programs are presented to indicate the major options within the Department

*Note that the course load for this recommended curriculum is heavier in the fall than in the spring. MAE 221 has a laboratory whereas MAE 222 does not. Instead, the laboratory in the spring is listed as a separate course, MAE 224. The time commitment for MAE 224 is about one-half of a regular course. Therefore, the course load in the fall is about 5 ½ courses whereas the course load in the spring is about 4 ½ courses. The course grade in MAE 224 is determined from the laboratory course work from both the fall and spring terms.
C. Mechanical Engineering

Students desiring an emphasis on design and analysis of the dynamics and control of engineering devices can follow the Dynamics Systems and Design Option. Students desiring an emphasis on power generation and conversion can elect to follow the Energy Sciences Option. It is however not necessary to rigidly follow either of these options as long as the requirements in Section II are satisfied.

1. Dynamic Systems and Design (Typical program)

JUNIOR YEAR

FALL
- MAE 325 Structural Analysis & Intro to Finite Element Methods
- MAE 321 Engineering Design
- MAE 324 Structure and Properties of Materials or MAE 423 Heat Transfer
- N.T.E.
- N.T.E.

SPRING
- Mathematics Elective
- T.E. or MSE 301 Materials Science and Engineering
- MAE 433 Automatic Control Systems
- T.E./N.T.E.
- T.E/N.T.E.

SENIOR YEAR

FALL
- Senior Thesis with or without Design
- MAE 345 Robotics and Intelligent Systems*
- MAE 412 Microprocessors for Measurement and Control
- N.T.E.

SPRING
- Senior Thesis with or without Design
- MAE 322 Mechanical Design
- T.E./N.T.E.
- N.T.E.

*Normally MAE 345 is offered in alternate years – plan accordingly.

SUGGESTED TECHNICAL ELECTIVES

FALL
- MAE 331 Aircraft Flight Dynamics
- MAE 341 Space Flight
- MAE 335 Fluid Dynamics
- MAE 345 Robotics and Intelligent Systems
- MAE 412 Microprocessors for Measurement & Control
- CEE 361 Structural Analysis and Introduction to Finite-Element Methods

SPRING
- MAE 328 Energy for a Greenhouse-Constrained World
- MAE 332 Aircraft Design
- MAE 342 Space System Design
- MAE 344 Introduction to Bioengineering and Medical Devices
- MAE 427 Mobile Power Plants
- MAE 434 Modern Control
- CEE 461 Design of Large Scale Structures
- MAE 546 Optimal Control and Estimation
2. Energy Sciences (Typical Program)

JUNIOR YEAR

FALL
- MAE 325 Structural Analysis & Intro to Finite Element Methods
- MAE 321 Engineering Design
- MAE 335 Fluid Dynamics
- T.E./N.T.E.
- N.T.E.

SPRING
- Mathematics Elective
- MAE 322 Mechanical Design
- MSE 301 Materials Science and Engineering
- MAE 427 Mobile Power Plants
- N.T.E.

SENIOR YEAR

FALL
- MAE 335 Fluid Dynamics
- MAE 339 Independent Work with Design
- MAE 423 Heat Transfer
- N.T.E.
- N.T.E.

SPRING
- MAE 328 Energy for a Greenhouse- Constrained World
- MAE 433 Automatic Control Systems
- T.E./N.T.E.
- N.T.E.

SUGGESTED TECHNICAL ELECTIVES

FALL
- MAE 527 Physics of Gases I
- MAE 331 Aircraft Flight Dynamics
- MAE 341 Space Flight
- MAE 412 Microprocessors for Measurement and Control

SPRING
- MAE 426 Rockets and Air-Breathing Propulsion Technology
- MAE 531 Combustion
- MAE 332 Aircraft Design
- MAE 342 Space System Design

SUGGESTED NON-TECHNICAL ELECTIVES

FALL
- ECO 100 Introduction to Microeconomics

SPRING
- ECO 101 Introduction to Macroeconomics

3. General Mechanical Engineering

Students not wishing to specialize in either one of the areas above (1 or 2) can select any mix of the two sample curricula, provided they meet the requirements stated in Section II.
D. Aerospace Engineering

Students wishing to concentrate their study on vehicles in air and space follow the curriculum in Aerospace Engineering (see Section II for required courses). A typical program is listed below:

**JUNIOR YEAR**

<table>
<thead>
<tr>
<th>FALL</th>
<th>SPRING</th>
</tr>
</thead>
<tbody>
<tr>
<td>▪ MAE 325 Structural Analysis and Intro to Finite Element Methods</td>
<td>▪ MAE 3X2 Design*</td>

E. Engineering Physics Program

Students with a strong interest in applied science and plans for graduate study may wish to participate in the Engineering Physics Program. Students should contact the Engineering Physics Program Director when they join the Department. The program requirements include six Physics courses beyond the freshman level (the sequence Physics 208, 305 is required), and two upper class mathematics courses (300 and 400 level).

Physics 205/207 usually substitutes for MAE 206. The Departmental requirement of MAE 223 is normally met by taking MAE 325 (CEE 361), or MAE 332 or MAE 342 during the Junior Year (see below).

*Note: This sample Engineering Physics program is in coordination with the Mechanical Engineering program. The Aerospace program may also be followed.*
F. Materials Science in Engineering Program

Students wishing to concentrate in materials engineering may choose courses that satisfy both the Departmental course requirements for mechanical or aerospace engineering, and the Certificate in Materials Science and Engineering. **The certificate program requires:**

1. One core course in materials (MAE 324 or MSE 301);
2. One materials experimental methods course (MSE 302 or CHM 372); note CHM 371 may be taken if CHM 372 not offered;
3. Three additional courses from the materials elective list, and;
4. A two semester senior thesis on a materials topic approved by the certificate committee.

**The Departmental program(s) require:**

One materials course, four engineering science courses, three design courses and one semester of independent work or two semesters of senior thesis. Specified materials science technical electives will qualify as engineering science technical electives in the Mechanical program. See list of engineering science courses on page 5 of this booklet.

A typical course sequence following the Mechanical Engineering Program and Materials Certificate Program is as follows:

**SOPHOMORE**

**FALL**
- MAE 221 Thermodynamics
- Mathematics
- MAE 324 Structure and Properties of Materials
- MAE 223 Modern Solid Mechanics
- N.T.E.

**SPRING**
- MAE 206 Intro to Engineering Dynamics
- MAE 222 Fluid Mechanics
- MAE 224 Integrated Engineering Science Laboratory
- N.T.E.
- T.E.

**JUNIOR**

**FALL**
- Mathematics Elective
- MAE 321 Engineering Design
- MSE 302 Materials Lab
- MAE 412 Microprocessors for Measurement and Control
- N.T.E.

**SPRING**
- MAE 322 Mechanical Design
- MAE 433 Automatic Controls
- Materials T.E.
- N.T.E.
SENIOR  

FALL
- Begin Materials Senior Thesis with Design
- CHE 415 Polymers
- MAE 325 Structural Analysis & Intro to Finite Element Methods
- MAE 423 Heat Transfer
- N.T.E.

SPRING
- MAE 442D Materials Senior Thesis with Design
- Materials T.E.
- N.T.E.
- N.T.E.

NOTE: Those students wishing to follow the Aerospace Engineering Program should consult with their Academic Advisor or Departmental Representative for careful selection of technical electives. For the Aerospace Program MAE 331/332 Flight Dynamics and Aircraft Design or MAE 341/342 Space Flight and Space Craft Design are required as well as MAE 427 Mobile Power Plants or MAE 426 Rocket and Air-Breathing Propulsion Technology. MAE 335 Fluid Dynamics must be taken in a fall semester in lieu of MAE 423 Heat Transfer.

SUGGESTED TECHNICAL ELECTIVES:

One of the attractive features of the program is the opportunity to choose a focus in a particular area of materials science and engineering that is of special interest to the student. For example, students may choose electives in the areas of: micro- and nano-scale materials science and engineering; biomedical materials and bioengineering; materials modeling, or structural materials.

Other areas of concentration may also be developed, depending on student interest. The technical electives may be selected from the list of courses shown below. Note that they include both undergraduate and graduate courses. Students are encouraged to take selected graduate courses, especially in their senior year.

Approved Undergraduate Courses in Materials Science and Engineering:

CHM 303/304 Organic Chemistry  
CHM 305/306 Physical Chemistry  
CHM 406 Advanced Physical Chemistry  
CHM 407/408 Inorganic Chemistry  
CHE 410 Molecular Structure and Property: Product Engineering  
CHE 415 Polymers  
CHE 421 Catalytic Chemistry  
ELE 341 Solid-State Devices  
ELE 342 Physical Principles of Electronic Devices  
ELE 351 Electromagnetic Field Theory and Optics  
ELE 352 Physical Optics  
ELE 441/442 Solid-State Physics I, II  
ELE 453 Optical Electronics  
MAE 324 Structure and Properties of Materials  
MAE 344 Introduction to Biomedical Engineering  
MOL 350 Laboratory in Molecular Biology
PHY 304 Advanced Electromagnetism
PHY 305 Introduction to Quantum Theory
PHY 405 Modern Physics I: Condensed Matter Physics

Note: Additional materials science courses have been proposed and are pending approval.

**Graduate Courses Suitable for the Certificate Program:**

MSE 501/CHM 525/MAE 515 Introduction to Materials
MSE 502 Thermodynamics and Kinetics of Materials
MSE 503 Structure of Materials
MSE 504 Modeling and Simulation in Materials Science
MSE 510/EE 541 Electronic Materials
MSE 511/EE 551 Theory and Application of Photonic Materials and Devices
MSE 512/MAE 518 Structural Materials
MSE 513/CHM 511 Chemistry and Physics of Nanomaterials
MSE 514/CHE 544 Solid-State Properties of Polymers
MSE 515/APC 515 Random Heterogeneous Materials
MSE 516, 517/PHY 525, 526 Condensed-Matter Physics
MSE 530/CHE 531 Introduction to Nano- and Microfabrication
MSE 532/CHE 541 Polymer Synthesis
CHE 522 Colloidal Dispersions
CHE 543 Solution Properties of Polymers
CHE 553 Topics in Interfacial Chemistry
CHE 555 Topics in Polymer Materials: Molecular Structure and Properties
MSE 534/EE 549 Physics and Technology of VLSI
MSE 540/MAE 516 Fracture Mechanics
CHM 501 Introduction to Quantum Chemistry
CHM 503 Introduction to Statistical Mechanics
CHM 507 Solid-State Chemistry
G. Interdepartmental Programs

1. **Program in Engineering and Management Systems**

Students with a strong interest in the systems and management aspect of an engineering career may combine Departmental courses with the requirements of the Program in **Engineering and Management Systems**. Those wishing to pursue this program should see the EMS Program Director (see Section VIII) early in their academic career. A number of the program requirements satisfy Departmental requirements as well.

2. **Program in Applied and Computational Mathematics**

Students with interests in applied mathematics may use upper class electives to satisfy program requirements in Applied and Computational Mathematics. Students should contact PACM Program Director for further details, see Section VIII.

3. **Program in Engineering Biology**

Students interested in engineering biology may use upper class electives to satisfy the requirements of this program. Students should contact the EB Program Director for specific details, see Section VIII.

4. **Program in Robotics and Intelligent Systems**

Students interested in robotics and intelligent systems may use upper class electives to satisfy the requirements of this program. Students should contact the RIS Program Director for specific details, see Section VIII.

5. **Program in Materials Science and Engineering**

Students interested in materials science and engineering may use upper class electives to satisfy the requirements of this program. Students should contact the MSE Program Director for specific details, see Section VIII.

Sufficient flexibility is present in the Department Program to permit students to participate in other certificate programs such as the one offered by the Woodrow Wilson School.

6. **Program in Sustainable Energy**

Students interested in sustainable energy may use upper class electives to satisfy the requirements of this program. Students should contact the SE Program Director for specific details, see Section VIII.
IV. DEPARTMENTAL PRIZES

Six Departmental prizes are awarded each year at Class Day.

**THE GEORGE BIENKOWSKI PRIZE:** This is a financial award given in honor of George Bienkowski, former Professor and Undergraduate Representative. This award is given to a senior student(s) of sound academic standing and who has contributed to the department and engineering through their service during their career at Princeton.

**THE JOHN MARSHALL II MEMORIAL PRIZE:** This prize provides financial support for undergraduate independent work with preference given to projects in aerospace engineering. The prize is given in memory John Marshall II, ’72. Prize winners are selected by the Undergraduate Faculty Committee based on written proposals submitted early in the fall. Additionally, a prize will be awarded in spring.

**DONALD JANSSEN DIKE AWARD FOR EXCELLENCE IN UNDERGRADUATE RESEARCH:** In memory of Donald Janssen (D.J.) Dike, ’51. This financial award is presented to senior or seniors who in the opinion of the faculty have excelled in independent work.

**SAU-HAI LAM *58 PRIZE IN MECHANICAL AND AEROSPACE ENGINEERING**
Established by a donation from Professor Sau-Hai Lam, an emeritus faculty member, to the Mechanical and Aerospace Engineering Department, this prize was established to recognize graduating seniors and possibly juniors for their outstanding academic achievement.

**MORGAN W. MCKINZIE ’93 SENIOR THESIS FUND AND PRIZE**
In memory of Morgan W. McKinzie ’93. The Senior Thesis fund provides financial support for independent work with preference given to projects in aircraft design and propulsion. The Senior Thesis prize is a financial award for the best Senior Thesis in the MAE Department as determined by the faculty.

**ENOCH J. DURBIN PRIZE FOR ENGINEERING INNOVATION**
This prize, established in memory of faculty emeritus Enoch J. Durbin, is awarded to a senior in the Department where independent work or thesis has shown special interest and aptitude in engineering innovation.
V.  INDEPENDENT WORK AND STUDENT PUBLISHED PAPERS

A good indication of the interest of students in the MAE Department is the independent work they have chosen. Recent topics are given below:

**Aero/Astro Engineering**

*Finding Another Earth: Design and Simulation of the Formation Flying Control System for the THEIA Mission* – E. Chen ’09, M. Isakowitz ’09, R. Johnson ’09, D. Maass ’09 (Advisor – Kasdin)

**Materials and Biomaterials**

**Computational Fluid Dynamics & Fluid Mechanics**

*Variable Drag Element Applied on a Vertical Axis Wind Turbine for Improved Performance* – D. Petrovics ’09, S. Ritchie ’09 (Advisor– Martinelli)

*A Study in Computational Fluid Dynamics using a Vorticity – Stream Function Formulation with Mesh Refinement* – J. Knight ’09 (Advisor – Martinelli)

**Energy and Environment (Combustion)**

*Cycled Flow: A Sustainable Bicycle Powered Centrifugal Water Pump* – E. Bernstein ’09, N. McAdoo ’09 (Advisor – Soboyejo)

*Design and Fabrication of a Nanoscale Thermal Anemometry Probe Via Directed Electrochemical Nanowire Assembly* – J. Kawasaki ’09 (Advisor – Arnold & Smits)

Improving Light Vehicle Efficiency via an Epicycloid Transmission Based Hybrid System – S. Slovenski ’09, G. Thalheim ’09 (Advisor – Littman)

Laser Direct Write of TiO2 Dye-Sensitized Solar Cells – T. Yersak ’09 (Advisor – Arnold)

Humans and Machines, Components and Controls

Self-Sufficient Autonomous Sailboat for Trans-Atlantic Passage – G. Franken ’09, I. Ashwash ’09 (ELE) (Advisor – Littman & Curtiss)

Strength and Durability of Joining Bamboo with Carbon Fiber Joints and Applications to Industry – N. Frey ’09, W. Watts ’09, D. Wolf ’09 (Advisor – Soboyejo)

Hands Free Crutches – J. Odeyemi ’09, A. Rogers ’08 (Advisor – Soboyejo)

The Structural Performance of Golf Cart Frames Made of Bamboo – E. Giunipero ’09 (Advisor – Soboyejo)

Learning the Primary Colors of Dance – A. Laviers ’09 (Advisor – Leonard)

Passive, Resonant Leg-Powered Generator – M. Tilghman ’09 (Advisor – Littman)
Independent Work Projects or Senior Thesis research may result in a published paper with the student’s advisor. Here are some examples of student published papers:

VI. POST-GRADUATION PLANS

An indication of the career plans of the graduates of the Department obtained from the immediate post graduation plans of the Classes of 2005 through 2009 are charted below.
## VII. FACULTY RESEARCH INTERESTS

**Craig B. Arnold**  
Research focuses on laser processing and transport in materials. Current experimental work includes laser direct-write and non-traditional patterning of small-scale devices and structures, lightweight and flexible energy storage systems, adaptive optics and optical trapping, and materials processing for mid-infrared technologies.

**Frediano V. Bracco**  
*Emeritus*  
Experimental and computational studies of combustion in reciprocating engines to understand their controlling combustion processes.

**Garry L. Brown**  
Fluid mechanics; a radiatively driven hypersonic wind-tunnel, turbulence, shear flow structure and mixing, multi-hole cooling and heat transfer, compressible flows with real gas effects on heat transfer, supersonic receptivity, instability and transition.

**Emily Carter**  
Development of efficient and accurate quantum mechanics techniques to characterize renewable fuel combustion chemistry, to design metal alloys for lightweight vehicles and armor, metal oxides for solar energy conversion (photovoltaics for electricity and photocatalysts for fuels) and solid oxide fuel cells (for clean electricity from fuels).

**Edgar Y. Choueiri**  
Spacecraft propulsion, plasma dynamics, astronautics, and space plasma physics.

**Howard C. Curtiss, Jr.**  
*(Emeritus)*  
Dynamics and control characteristics of helicopters, VTOL aircraft. Sailing craft aerodynamics and control.

**Frederick L. Dryer**  
Environmental/energy/propulsion areas. Conventional and alternative fuels, engine emissions, microgravity research, experimental and numerical study of combustion and chemical kinetics. Microchemical reaction and propulsion applications. Fire safety.

**Irvin Glassman**  
*(Emeritus)*  
Combustion related problems. Department history.

**Alexander Glaser**  
Research focuses on the technical aspects of nuclear-energy use and related fuel-cycle technologies, and specifically on questions related to the proliferation of nuclear weapons. Analyses are supported by computer simulations of reactors. Additional projects on nuclear nonproliferation and disarmament, including nuclear forensics and nuclear archaeology. Web: [http://nuclearfutures.princeton.edu](http://nuclearfutures.princeton.edu)

Michael G. Littman  Terrestrial Planet Finder (TPF) project and Re-creation and Archiving Joseph Henry’s Scientific Instruments. The TPF effort involves the use of adaptive optics to correct for errors in telescope mirror shape and reflectivity. The objective is to minimize the effect of diffraction to improve visibility of faint astronomical objects including earth-like planets around nearby stars. The history of engineering effort involves recreating Joseph Henry’s scientific instruments to illustrate their scientific foundations and their importance to society.

Michael McAlpine  The focus of our research is in exploring nanotechnology-enabled approaches to address fundamental problems in medicine, energy, and flexible electronics. Current experimental work is focused on 1) the synthesis, assembly, and characterization of new nanoscale materials, 2) the fabrication of portable energy sources which derive their power from biomechanical motion, and 3) strategies for developing miniaturized sensing platforms which can mimic nature's amazing sensory capabilities.

Richard B. Miles  New laser diagnostics for non intrusive detection with applications to combustion (for the detection of radical species and temperature), hypersonic flows (for the detection of temperature, vibrational nonequilibrium, air chemistry, and velocity), weakly ionized plasmas (for temperature, electron number density, and vibrational nonequilibrium), and for homeland defense (for detection of hazardous species in gas clouds); high speed imaging of flow structure; advanced technologies for the development of hypersonic vehicles including electron beam driven hypersonic wind tunnels; plasma aerodynamics for power extraction, drag reduction, performance enhancement and control of hypersonic air breathing vehicles and reentry vehicles; the study of molecular dynamics and energy transfer in small molecules; nonlinear optical processes in high fields; laser and plasma-driven aerodynamics; development of laser systems.
Daniel M. Nosenchuck  Experimental/computational fluid mechanics and instrumentation. Active control of boundary layer instabilities and turbulence. Product design and manufacture, rapid prototyping; entrepreneurship.

Clarence Rowley  Dynamical systems modeling of fluids, both to better understand the physics of complex flows, and to control these flows. Model reduction and symmetry reduction for bifurcation analysis and control. Numerical methods, and applications of geometric methods in fluid mechanics.

Barrie S. H. Royce  Present research is concerned with the mechanical properties of materials on the nanometer length scale. Of particular interest is study of materials in a biological environment and MEMS structures. Mechanical testing techniques are being developed to look at elastic and plastic properties of nano- or micro-structured materials, their resistance to fatigue environments, and the effects of surface morphology on cell-material interactions.

Alexander J. Smits  The study of turbulent flows at subsonic, supersonic and hypersonic speeds, fish-like propulsion systems, heat transfer, environmental fluid mechanics, and the development of new experimental techniques.

Winston O. Soboyejo  Research interests focus on engineered materials for applications in medicine/dentistry, alternative energy systems, transportation and infrastructure systems. Functionalized nanoparticles and BioMEMS structures are being developed for the targeting and treatment of cancer and cardiovascular disease, while novel concepts are being developed for future alternative energy systems. Eco-friendly materials are being explored for human transportation and infrastructure, while porous materials are being explored for water filtration.

Robert F. Stengel  Systems biology, aerospace dynamics and control, robotics and intelligent systems.
Howard A. Stone  Research interests are in fluid dynamics, widely interpreted, and include a combination of experiment, theory, simulation and modeling. The studies are oriented towards flow problems where viscous effects are significant. The Stone group has active projects involving multiphase flows in microfluidic devices, thin film flows, high-speed imaging of flow phenomena, investigations in bioengineering such as cellular-scale hydrodynamics, formation of biofilms, etc. Many projects occur at the boundaries of traditional disciplines.

Szymon Suckewer  Prof. Suckewer and his group’s interest and research revolve around ultra-short pulse lasers and their applications. Especially exciting are the medical applications of fsec-type lasers (in 100 fsec light travels a distance equal to \(1/3\) the diameter of a strand of human hair), which due to their very short pulses they act like very sharp scalpels. Prof. Suckewer’s group is using such lasers for a new type of eye surgery and for dermatology treatments. They are also using these types of lasers, but with extremely high intensity, for the development of X-ray lasers for applications in X-ray microscopy of biological cells. Besides applications and development of a new type of lasers they are also involved in improving the performance of internal combustion and jet engines by means of development of high volume plasma traveling spark ignition (TSI).
VIII. WHO TO SEE FOR MORE INFORMATION

Normally, Freshman who choose to pursue Engineering in this Department have their course selections for the Sophomore year approved by the Departmental Representative. Sophomore Class Advisors are currently: Prof. Michael G. Littman (A – M) and Prof. Craig Arnold (N – Z).

Upperclass students are assigned an academic advisor in the Department according to their area of interest (Aerospace Engineering, Mechanical Engineering, Engineering Physics). The advisor is available throughout the academic year to 1) discuss and advise students on course selections etc., 2) approve course selection score worksheets and course change forms. Students should feel free to discuss any questions related to their academic program with the Departmental Representative.

Departmental Representative: M.G. Littman D-202A E-Quad. Ext. 8-5198 mlittman@princeton.edu
Undergraduate Administrator: Jo Ann Love D-230 E-Quad Ext. 8-5169 jolove@princeton.edu

Upperclass Advisors:

Class of 2010:
Professor Edgar Choueiri, D432, E-Quad, Ext. 8-5220, choueiri@princeton.edu
Professor Yiguang Ju, D330, E-Quad, Ext. 8-5644, yju@princeton.edu
Professor Michael Littman, D202-A, E-Quad, Ext. 8-5169, mlittman@princeton.edu
Professor Gigi Martinelli, D302-C, E-Quad, Ext. 8-6652, gigi@phantom2.princeton.edu
Professor Dan Nosenchuck, D302-B, E-Quad, Ext. 8-5136, dan@princeton.edu
Professor Clarence Rowley, D234, E-Quad, Ext. 8-7321, cwrowley@princeton.edu
Professor Wole Soboyejo, D404, E-Quad, Ext. 8-5609, soboyejo@princeton.edu
Professor Robert Stengel, D202-C, E-Quad, Ext. 8-5103, stengel@princeton.edu

Class of 2011:
Professor Mikko Haataja, D404-C, E-Quad, Ext. 8-9126, mhaataja@princeton.edu
Professor Yiguang Ju, D330, E-Quad, Ext. 8-5644, yju@princeton.edu
Professor Michael Littman, D202-A, E-Quad, Ext. 8-5169, mlittman@princeton.edu
Professor Michael McAlpine, D414, E-Quad, Ext. 8-8613, mcm@princeton.edu
Professor Richard Miles, D414, E-Quad, Ext. 8-5131, miles@princeton.edu
Professor Clarence Rowley, D234, E-Quad, Ext. 8-7321, cwrowley@princeton.edu

Engineering Physics:
Professor Edgar Choueiri, EP Lab E-Quad. or D-432 E-Quad., Ext. 8-5220

Engineering Biology:
Professor Michael Littman, D-202A E-Quad., Ext. 8-5198

Student Departmental Committee and Other Student Committees (2009-2010):

MAE Undergraduate Student Council:
President: Victor Pinedo ’10, vpinedo@princeton.edu

AIAA (American Institute of Aeronautics and Astronautics):  
Faculty Advisor: Richard Miles, miles@princeton.edu  
President: David Hegermiller ’10, dhegermil@princeton.edu  
Vice President: Carly Sakumura ’10, sakumura@princeton.edu  
Treasurer: Lauren Sykora ’11, lsykora@princeton.edu  
Social Chair: Trevor O’Neill ’10, tmoneill@princeton.edu  
Tech/Web Chair: Christian Laftchiev ’11, clafitchi@princeton.edu  
Publicity Chair: Chelsea Graf ’11, cgraf@princeton.edu

ASME (American Society of Mechanical Engineers):
Faculty Advisor: Clarence Rowley, cwrowley@princeton.edu

SAE and Formula SAE (Society of Automotive Engineering):
Faculty Advisor: Yiguang Ju, yju@princeton.edu

Study Abroad and Foreign Exchange:

Engineering is an international enterprise and American companies undertake projects on all continents. In addition, the globalization of enterprises frequently distributes the manufacturing and research activities of a company to several countries. Well-prepared engineers should, therefore, be familiar with the different cultures in which their expertise may be used. The Study Abroad program of the University provides an excellent opportunity to begin this process while obtaining credits from a foreign university that will count towards your degree program. Because the academic year follows different schedules in different countries and hemispheres, you will need to explore the most suitable time to enter such a program. It may be possible to combine a summer program in a country with at least one term of study in your discipline. In this context, some students with advanced standing have used the spring term of the sophomore year followed by summer study whereas others have used the fall term of the junior year. Several foreign universities prefer visiting students to attend for a full academic year as their courses run through the year and the examinations occur at the end of this period.

The Department encourages students who are interested in this educational opportunity to discuss it with their advisor; the Department Undergraduate Representative, Professor Michael G. Littman; Dean Peter Bogucki of the School of Engineering and Applied Science; and Dean Nancy Kanach, Office of the Dean of the College. You may also access the Study Abroad home page. Planning should start as early in the academic process as possible so that your degree program can be designed to accommodate this period of foreign study.

In the past few years, MAE students have studied at the University of Cape Town/South Africa, the University of Auckland/New Zealand, the University of Melbourne/Australia.

Foreign Exchange:
The School of Engineering and Princeton University have established two Foreign Exchange programs. MAE students have recently participated in the Oxford University Exchange Program in the United Kingdom spending their Junior year abroad. A program has also been established with Ecole Centrale in Paris which may focus on energy studies followed by a summer internship in an energy related industry. A strong background in French is encouraged. Students interested in the Ecole program may contact MAE Professor Richard Miles, 8-5131, miles@princeton.edu.

**Notes:**

**Substitutions not requiring Departmental Representative’s Approval:**

**Math:**
EGR 192 replaces MAT 201 or MAT 203

**Physics:**
PHY 107/108/109 sequence “General Physics” may replace the PHY103/105 or PHY 105/106 sequence
EGR 191 replaces PHY 103 or PHY 105
EGR 193 replaces PHY 104 or PHY 106

**Chemistry:**
CHM 207 Advanced General Chemistry: Materials Chemistry

NOTE: ISC 231, 232 (Fall) and ISC 233, 234 (Spring) replaces PHY 105/106, CHM 201 and COS 126

**All other courses substitutions must be approved in writing by the Departmental Representative.**

**Design Courses:**
MAE 321 Engineering Design
MAE 322 Mechanical Design
MAE 332 Aircraft Design
MAE 342 Space System Design
MAE 412 Microprocessors for Measurement and Control
# Mechanical Engineering Program

Notes:

Substitutions not requiring Departmental Representative’s Approval:

**Math:**
EGR 192 replaces MAT 201 or MAT 203

**Physics:**
PHY 107/108/109 sequence “General Physics” may replace the PHY103/105 or PHY 105/106 sequence
EGR 191 replaces PHY 103 or PHY 105
EGR 193 replaces PHY 104 or PHY 106

**Chemistry:**
CHM 207 Advanced General Chemistry: Materials Chemistry

**NOTE:** ISC 231, 232 (Fall) and ISC 233, 234 (Spring) replaces PHY 105/106, CHM 201 and COS 126

**Suggested Second Math Course:**
MAE 306 [MAT 302] Mathematics in Engineering II (recommended for those planning graduate work in engineering or applied science)
ORF 245 Fundamentals of Engineering Statistics
ORF 307 Optimization
ORF 309 Probability and Stochastic Systems (MAT 309/ELE 380)
COS 309 Fundamentals of Scientific Computing
COS 340 Reasoning About Computation
MAT 304 Introduction to Partial Differential Equations
MAT 305 Mathematical Programming
MAT 306 Introduction to Discrete Mathematics
MAT 317 Complex Analysis with Applications

All other courses substitutions must be approved in writing by the Departmental Representative.

**Design Courses:**
MAE 321 Engineering Design
MAE 322 Mechanical Design
MAE 332 Aircraft Design
MAE 342 Space System Design
MAE 412 Microprocessors for Measurement and Control
